

OMOTOLA OLAOTI

FRONTEND DEVELOPER

Omotolaolaoti.netlify.app

omotolaolaoti@gmail.com

Ibadan, Nigeria.

I am a frontend developer with a passion for creating unique websites with improved users interaction and experience. I love implementing new ideas into functioning websites. I have a strong desire to learn and improve as I apply my skills in cooperative teams to build awesome websites.

TOOLS I HAVE WORKED WITH

Redux, Styled component, Github, Firebase

SKILLS

HTML, CSS/SASS, Javascript, React.

EXPERIENCE

NETFLIX CLONE

I cloned the popular Netflix website which I made functional by working with tmdb and fetching requests from the API using axios. UI is pixel perfect and made to function on all devices

ENVER

I converted a Figma design into a pixel perfect react app with neat and reusable components. I used scss in giving it a perfect styling.

WEBFLOW E-COMMECE (Contract)

I used Javascript in creating a reusable e-commerce functionality in webflow website, a calculator which allows buyers to make changes and then calculates (adds to and subtracts from) the total units of quantity and price before sending the total to the backend.

TO-DO APP

I created a simple app to allow users to enter and delete activity in the to-do list. Using a fake api, activities are updated on the server as users make changes.

PASSWORD/EMAIL CHECK

I created a password check functionality with Javascript that loops through the entered password to decide if it is strong enough (must include: no space, capital letter, a symbol, a number, more than 8 characters) or not. Email check functionality makes sure the email contains '@' and '.' And makes sure there are letters after the '.' Before the users are allowed to submit.

EDUCATION

Bsc. Electronic and Electrical Engineering 2019 - Till Date
