FRONTEND TUTOR

Frontend website development with html, css and JavaScript

Currently training 4 people on frontend website development

PERSONAL PROJECTS

Portfolio, GITHUB LINK

- Developed the portfolio website using HTML, CSS and JavaScript.
- Created a user friendly interface and ensure reading and navigating is easy.
- I used Netlify forms to acquire submitted informations.
- Maintain and make changes to the website when needed.

Cowrywise clone, GITHUB LINK

- I cloned the cowrywise.com home page and some other pages using Nextjs, scss and gsap.
- Acquired more knowledge on Nextjs and Vercel and ensured there was no production error.
- Added similar animations as of cloned website were added while making sure user experience was not tampered with. □ Website was deployed on vercel.

Notes website, GITHUB LINK

- Built a fully functioning website with react and scss to serve as a notes for client
- Website allows copying of a section or a whole column
- Employed the use of local storage to save users input as they type

Getlinked clone, GITHUB LINK

- Developed a visually appealing figma design using nextjs, scss and gsap
- Website interacts with api to save contacts and registrations
- Animations were added with good user experience
